

PowerCUBE

DKTUNING.COM

V2.1

PRODUCT DESCRIPTION

Our most powerful performance chip at an affordable price!

The POWERCUBE is a unique hybrid of power enhancement device which works conveniently from inside the car. Operating at 20MHz with plenty of Flash Memory, the POWERCUBE offers extended compatibility and faster patching for higher, more consistent gains.

The POWERCUBE is a vehicle specific, custom programmed 20MHz Microcontroller. It utilizes its high speed serial input/output to communicate directly with the ECU through the OBD-II port. Inside your ECU is a 3-dimensional table of values called a map. This table tells your fuel injectors exactly how much fuel to deliver given current air temperature, density, engine speed, throttle position, and other variables. From the factory, this map is generic and designed to provide a sluggish, no-surprises style of driving to suit a wide range of drivers. The POWERCUBE temporarily replaces parts of this map with parts from our highly tuned performance maps, and will safely unleash your engine's full potential, without voiding the warranty.

FEATURES

- Programmable for either Performance or Economy mode
- Gains up to 5-7% of Torque & Horsepower
- Specific car program for maximum custom performance improvement
- Transferable to another car (reprogramming required)
- Easy Plug 'n' Play. Install in seconds!
- 2 years warranty

Recommended modifications:

- K&N or equivalent non-restrictive intake
- 97 octane fuel or higher

The POWERCUBE is compatible with factory equipped Turbo/Superchargers, diesel engines, Flex-Fuel, & HHO systems. It is NOT compatible with hybrid engine options, propane or natural-gas powered engines.

Intelligence Built-in

The POWERCUBE has room for up to 8 performance maps, which we use to cover different engine options for a particular vehicle. For example, the 1999 Ford Mustang Chip will be compatible with both the 3.8L V6 and the 4.6L V8. The POWERCUBE will read the first few bytes of data from your ECU during calibration to determine which map to use.
